

§ 630.22

(d) A swordfish harvested from or possessed in the North Atlantic Ocean, including the Gulf of Mexico and Caribbean Sea, north of 5°N. latitude in the recreational fishery may not be sold, purchased, traded, or bartered or attempted to be sold, purchased, traded, or bartered.

§ 630.22 Gear restrictions.

A drift gillnet with a total length of 2.5 kilometers or more may not be used to fish for swordfish. A vessel using or having aboard a drift gillnet with a total length of 2.5 kilometers or more may not possess a swordfish.

§ 630.23 Harvest limitations.

(a) *Minimum size.* The minimum allowable size for possession on board a fishing vessel for a swordfish taken from the management unit is 29 inches (73 cm) carcass length, measured along the body contour (i.e., a curved measurement) from the cleithrum to the anterior portion of the caudal keel (CK measurement) or, if swordfish are weighed, 33 lb (15 kg) dressed weight. The cleithrum is the semicircular bony structure that forms the posterior edge of the gill opening. Measurement must be made at the point on the cleithrum that provides the shortest possible CK measurement (Figure 1 to part 630).

(b) *Carcass condition.* A swordfish possessed in the North Atlantic Ocean, including the Gulf of Mexico and the Caribbean Sea, north of 5°N. latitude must be in whole or dressed form, and a swordfish landed from a fishing vessel in an Atlantic, Gulf of Mexico, or Caribbean coastal state must be maintained in whole or dressed form through off-loading, except such swordfish as are damaged by shark bites. A shark-bit swordfish for which the remainder of the carcass is less than the minimum size limit specified in paragraph (a) of this section may not be landed.

(c) *Vessel trip limits.* In 1996, vessels issued a swordfish permit under § 630.4 may not land from, or possess during, a single trip more than 31,600 lb (14,334 kg) dressed weight of swordfish, unless

50 CFR Ch. VI (10-1-96 Edition)

a closure has been effected under § 630.25.

[57 FR 57369, Dec. 4, 1992, as amended at 60 FR 46778, Sept. 8, 1995; 61 FR 27307, May 31, 1996]

§ 630.24 Quotas.

(a) *Applicability.* A swordfish harvested from the North Atlantic swordfish stock by a vessel of the United States in other than the recreational fishery is counted against the directed-fishery gear quota or the by catch quota. A swordfish harvested by drift gillnet, longline, or harpoon and landed before the effective date of a closure for that gear, done pursuant to § 630.25(a)(1), is counted against the applicable directed-fishery gear quota. After a gear closure, a swordfish landed by a vessel using or possessing gear for which a bycatch is allowed under § 630.25(c) is counted against the bycatch allocation specified in paragraph (c) of this section. Notwithstanding the above, a swordfish harvested by a vessel using or possessing gear other than drift gillnet, longline, harpoon, or rod and reel is counted against the bycatch quota specified in paragraph (c) of this section at all times.

(b) *Directed-fishery quota.*

(1) The directed fishery quota for the period January 1, 1996, through May 31, 1996, is 1,021 mt dressed weight for the longline fishery, 22.5 mt dressed weight for the drift gillnet fishery, and 106 mt dressed weight for the bycatch fishery.

(2) The annual quota for the directed fishery for swordfish is 2,371 mt dressed weight, divided into two semiannual quotas as follows:

(i) For the semiannual period June 1 through November 30:

(A) 23.45 mt dressed weight, that may be harvested by drift gillnet.

(B) 1,162.05 mt dressed weight that may be harvested by longline and harpoon. To account for harvested fish that are discarded dead, only 1064.44 mt dressed weight, may be landed in this category.

(ii) For the semiannual period December 1 through May 31:

(A) 23.45 mt dressed weight that may be harvested by drift gillnet.
